The project at a glance

3 team members	6 custom objects	1 Record-triggered Flow	1 Approval Process
5 Apex classes and triggers	4 profiles and roles in use	1 Report and Dashboard	1 Permission Set

01 Project Overview

What EventForce is and why we built it

Event planning companies handle many things at the same time: client requests, venue bookings, vendor assignments and feedback. When these live in notebooks, chats and spreadsheets, bookings clash, vendors are missed and clients are not kept informed. **EventForce Management System** moves all of this into one Salesforce CRM so that every event, client, venue and vendor is tracked in a single connected data model.

The application is built in a Salesforce Developer Edition org. It uses custom objects for the data, validation rules for clean entry, a Flow for client reminders, an Approval Process for cancellations, Apex for venue availability, and reports and a dashboard for visibility. Access is controlled by profiles, roles, a permission set and organization-wide defaults.

Objectives

- Store clients, events, venues, vendors and feedback in one connected CRM.
- Prevent a venue from being booked twice on the same date.
- Keep venue availability up to date automatically when an event is confirmed or cancelled.
- Remind clients three days before their event without manual follow-up.
- Route event cancellation requests through a manager approval with email alerts.
- Give each type of user only the access that their job needs.
- Show upcoming events and venue usage through reports and a dashboard.

Technology used

Area	Salesforce feature used
Platform	Salesforce Developer Edition org
Data model	Custom objects, Lookup and Master-Detail relationships, formula field
Automation	Record-Triggered Flow (scheduled path), Approval Process, Email Alerts, Field Updates
Code	Apex class, Apex triggers, Batch Apex and Schedulable Apex (API version 67)
UI	Custom tabs, Lightning App (Event Planner), Reports and Dashboards
Security	Profiles, Roles, Users, Permission Set, Organization-Wide Defaults

02 Phase 1: Requirement Analysis and Planning

Scope, stakeholders and roadmap

Functional scope

- **Data model:** six custom objects: Event, Client, Vendor, Venue, Feedback and Event Vendor (junction).
- **Relationships:** Lookup, Master-Detail and a many-to-many link between Event and Vendor.
- **Validation:** rules and a formula field to keep data accurate.
- **Automation:** a Flow for client reminders and an Approval Process for cancellations.
- **Apex:** venue status updates, double-booking prevention, and a scheduled batch job.
- **Security:** profiles, roles, a permission set and sharing settings.
- **Insights:** a report and a dashboard on upcoming events.

Stakeholders

Stakeholder	What they do in the system
Client	Requests event services, gives feedback and follows event updates.
Event Coordinator	Schedules events, talks to clients and raises cancellation requests.
Vendor Manager	Handles vendors for services such as catering, decor and logistics.
Event Admin	Oversees the system, users, access and data.

Execution roadmap

Step	Work item	Phase
1	Create the Developer org and the six custom objects with fields and relationships	Phase 2
2	Add the Client email validation rule	Phase 2
3	Build the Event cancellation Approval Process	Phase 2
4	Build the 3-day Client Reminder Flow	Phase 2
5	Write Apex classes and triggers for venue status and double booking	Phase 2
6	Create tabs, the Event Planner app, report and dashboard	Phase 3
7	Set up profiles, roles, users, permission set and sharing settings	Phase 4
8	Test the features and record the results	Phase 4

03 Phase 2: Backend Development and Configuration

Org setup, data model, automation and Apex

Milestone 1: Salesforce Developer org

We signed up for a Salesforce Developer Edition org, verified the account from the email link and logged in to Setup. All objects, automation and code in this project were built inside this org.

Figure 1. Developer Edition org home page after login.

Milestone 2: Custom objects

Five main objects were created from Setup > Object Manager: **Event**, **Client**, **Vendor**, **Venue** and **Feedback**. A sixth object, **Event Vendor**, is a junction object. Reports, search and Notes and Attachments were enabled on the objects. Feedback uses an Auto Number record name.

Figure 2. Object Manager showing the custom objects Feedback, Venue, Vendor, Client and Event.

Milestone 3: Fields and relationships

Each object holds the fields it needs. The tables and screenshots below show the final field set.

Object	Key fields
Event	Event Name (Text 80), Client (Lookup), Venue (Lookup), Event Date (Date), Event Type (Picklist), Event Status (Picklist), Event Budget (Formula, Currency)
Client	Client Name, Phone, Email, Address (Text Area 255), City (Picklist), Country (Picklist)
Vendor	Vendor Name, Phone, Email, Service Type (Multi-select Picklist), Status (Picklist)
Venue	Venue Name, Address (Text Area 255), Location (URL), Capacity (Number), Availability Status (Picklist)
Feedback	Feedback (Auto Number), Client (Lookup), Event (Lookup), Rating (Picklist), Comments (Long Text Area)
Event Vendor	Event (Master-Detail), Vendor (Master-Detail)

Relationship	Type	Purpose
Event to Client	Lookup	Each event belongs to a client
Event to Venue	Lookup	Each event is held at a venue
Feedback to Event	Lookup	Feedback is given for an event
Feedback to Client	Lookup	Feedback comes from a client

Relationship	Type	Purpose
Event Vendor to Event	Master-Detail	Junction side one
Event Vendor to Vendor	Master-Detail	Junction side two; gives the many-to-many link

Figure 3. Event object: Fields and Relationships (Client and Venue lookups).

Figure 7. Feedback object: Client and Event lookups with Rating and Comments.

Figure 8. Event Vendor junction object with two Master-Detail relationships.

Milestone 4: Validation rule

To keep contact data clean, the Client object has an active validation rule named **Email_Valid_Address**. It checks the Email field against a pattern and blocks the save when the format is wrong. The error message *Please Enter Valid Email Address* is shown on the Email field.

Figure 9. Client validation rule Email_Valid_Address.

Milestone 5: Approval Process for event cancellation

The process **Event_Cancellation_Process** runs on the Event object. A record enters the approval when **Event Status equals Pending Cancellation**. The event owner is the initial submitter and a single step, **Manager Review**, sends the request to the assigned approver.

Stage	Actions configured
Initial submission	Record Lock; Email Alert "Alert - Event Cancellation Request"

Stage	Actions configured
Final approval	Record Lock; Email Alert "Cancellation Approved"; Field Update "Event Status Update"
Final rejection	Record Unlock; Field Update "Event Status To Rejected"; Email Alert "Cancellation Rejected"
Recall	Record Unlock

The screenshot shows the Salesforce Setup page for Approval Processes. The left sidebar contains navigation links for Data, Feature Settings, Process Automation, and Approval Processes. The main content area displays the details for the 'Event_Cancellation_Process'.

Edit Remove	Field Update	Event Status Update

Final Rejection Actions

Action	Type	Description
Edit Remove	Record Lock	Unlock the record for editing
Edit Remove	Field Update	Event Status To Rejected
Edit Remove	Email Alert	Cancellation Rejected

Recall Actions

Action	Type	Description
	Record Lock	Unlock the record for editing

Figure 11. Approval step, final approval, final rejection and recall actions.

Milestone 6: Record-Triggered Flow

The Flow **Client Reminder 3 Days Before** is a Record-Triggered Flow on the Event object. It has a **Run Immediately** path and a **Schedule_3_Days_Before** scheduled path. The scheduled path waits until three days before the event date and then runs the action **Alert_Client_3Day_Reminder**, which sends the reminder email to the client. The Flow is saved and Active, with 0 errors and 0 warnings.

Figure 12. Flow Builder: Client Reminder 3 Days Before (Active).

Milestone 7: Apex classes and triggers

Apex handles the business rules that need code. All code is written in API version 67.

Component	Type	What it does
EventTrigger13	Trigger on Event (after insert, after update)	Calls VenueStatusHelper whenever an event is saved.
VenueStatusHelper	Apex class (with sharing)	Sets the venue to Reserved when the event is Confirmed and back to Available when it is Canceled.
PreventDoubleBooking	Trigger on Event	Looks up existing events at the same venue and adds the error "This Venue is already booked on this date." when the dates match.
BatchCompleteEvents	Batch Apex (Database.Batchable)	Finds events dated before today that are not Completed and marks them Completed.
ScheduleCompleteEvents	Schedulable Apex	Runs BatchCompleteEvents with a batch size of 200 on a schedule.

Figure 13. VenueStatusHelper class.

Figure 14. EventTrigger13 on the Event object.

Figure 15. PreventDoubleBooking trigger (double-booking check).

Figure 16. BatchCompleteEvents (Batch Apex).

Figure 17. ScheduleCompleteEvents (Schedulable Apex).

Figure 18. Apex Classes list in Setup showing the custom classes as Active.

04 Phase 3: UI/UX Development and Customization

Tabs, the Event Planner app, report and dashboard

Milestone 8: Custom tabs

A custom tab was created for each object so that users can reach records quickly: **Clients, Events, Feedbacks, Vendors and Venues**.

Figure 19. Custom Object Tabs in Setup.

Milestone 9: Lightning App

The Lightning App **Event Planner** groups the project in one place. Its navigation bar contains Events, Venues, Clients, Vendors, Feedbacks, Event Vendors, Reports and Dashboards, so a user does not need to search Setup to do daily work.

Figure 20. Lightning Experience App Manager.

Milestone 10: Reports

A report folder named **EventForce Report** was created to hold the project reports. The report **New Events with Venue Report** uses the Events with Venue report type, groups rows by Event Date and shows Event Name, Venue Name, Event Budget, Event Type and Client.

Figure 21. Reports folder with the EventForce Report folder.

Figure 22. New Events with Venue Report.

Milestone 11: Dashboard

The dashboard **EventForce Operations Dashboard** shows the donut chart *Upcoming Events by Month*, built from the report data. It gives coordinators a quick view of how many events are coming up.

Figure 23. EventForce Operations Dashboard.

05 Phase 4: Testing and Security

Access control and test plan

Milestone 12: Profiles

Custom profiles control what each user type can see and do. The profiles used are **Client Profile** (Salesforce Platform license), **Event Admin**, **Event Coordinator** and **Vendor Manager**.

Figure 24. Client Profile (custom profile, Salesforce Platform license).

Milestone 13: Roles

The role hierarchy places **Event Admin** under the CEO. The roles **Client**, **Event Coordinator** and **Vendor Manager** sit below Event Admin, so records owned by them are visible upward in the hierarchy.

Figure 25. Role hierarchy.

Milestone 14: Users

User	Role	Profile
Sizzler Jaligam	Event Admin	Event Admin
Nawin Prasath	Event Coordinator	Event Coordinator
Lakshmi sri	Vendor Manager	Vendor Manager

Figure 27. User detail: Sizzler Jaligam (Event Admin role and profile).

Milestone 15: Permission Set

The permission set **Feedback Manager** adds extra access on top of a profile without changing the profile itself. It is assigned to the user **Nawin Prasath** (Event Coordinator).

Figure 28. Permission Sets list showing Feedback Manager.

Figure 29. Feedback Manager permission set overview.

Figure 30. Current assignment of the Feedback Manager permission set.

Milestone 16: Sharing Settings (OWD)

Organization-Wide Defaults set the baseline record access. **Event is Private**, so users see only their own events and those of users below them in the role hierarchy. **Client, Feedback, Vendor and Venue are Public Read/Write** because these are shared reference records. "Grant Access Using Hierarchies" is enabled for the custom objects.

Object	Default access
Event	Private
Client	Public Read/Write
Feedback	Public Read/Write
Vendor	Public Read/Write
Venue	Public Read/Write

Figure 31. Organization-Wide Defaults for the custom objects.

Test plan

The table lists the checks planned for the main features. The **Result** column is filled in after the test is run in the org, with a screenshot attached as evidence.

ID	Feature	Test steps	Expected result	Result
TC-01	Email validation	Create a Client with an invalid email such as "abc@".	Save is blocked; message "Please Enter Valid Email Address".	[] Pass
TC-02	Double booking	Create two Events at the same Venue on the same date.	Second save fails with "This Venue is already booked on this date."	[] Pass
TC-03	Venue reserved	Set an Event to Confirmed.	Venue Availability Status becomes Reserved.	[] Pass
TC-04	Venue available	Set the Event to Canceled.	Venue Availability Status becomes Available.	[] Pass
TC-05	Cancellation approval	Set Event Status to Pending Cancellation and submit for approval; approve it.	Record locks on submit; on approval the status updates and an email alert is sent.	[] Pass

ID	Feature	Test steps	Expected result	Result
TC-06	Cancellation rejection	Repeat TC-05 and reject the request.	Record unlocks, status changes to Rejected, rejection email is sent.	[] Pass
TC-07	Client reminder Flow	Create an Event dated a few days ahead.	Scheduled path sends the reminder 3 days before the Event Date.	[] Pass
TC-08	Batch job	Run BatchComplete Events with a past, non-completed Event.	The past Event is set to Completed.	[] Pass
TC-09	Access control	Log in as Event Coordinator and Vendor Manager.	Each user sees only what the profile, role and OWD allow.	[] Pass

06 Plan and Schedule

Agile sprints and story points

We worked in six short sprints. The work was split into user stories, each sized in story points, and the velocity was used to check that the team stayed on track.

Sprint	User story	Pts	Owner
1	USN-1: Create and configure the Salesforce Developer org.	2	Grace Evangelin J
2	USN-2: Create the objects, fields and relationships.	5	Beulah J
2	USN-3: Add the Client email validation rule.	2	Jayasri K
3	USN-4: Build the Event cancellation Approval Process.	5	Grace Evangelin J
3	USN-5: Build the 3-day Client Reminder Flow.	3	Jayasri K
4	USN-6: Apex class and triggers for venue status and double booking.	8	Grace Evangelin J
4	USN-7: Batch and Schedulable Apex to complete past events.	5	Beulah J
5	USN-8: Tabs, Event Planner app, report and dashboard.	5	Jayasri K
6	USN-9: Profiles, roles, users, permission set and sharing settings.	5	Beulah J

Story points planned per sprint (peak load in Sprint 4 shown in gold)

Figure 32. Planned story points per sprint (total 40).

Velocity. 40 story points over 6 sprints is about **6.7 points per sprint**. Sprint 4 carried the most work because the Apex code was the largest part of the project.

Sprint dates

Start date, end date and the points completed in each sprint.

Sprint	Points	Start date	End date	Completed
Sprint 1	2	02 / 10 / 2026	02 / 10 / 2026	2
Sprint 2	7	02 / 10 / 2026	02 / 10 / 2026	7
Sprint 3	8	02 / 10 / 2026	02 / 10 / 2026	8
Sprint 4	13	02 / 10 / 2026	02 / 10 / 2026	13
Sprint 5	5	02 / 10 / 2026	02 / 10 / 2026	5
Sprint 6	5	02 / 10 / 2026	02 / 10 / 2026	5

07 Strengths and Limits

An honest look at what we built

Strengths

- All event, client, venue, vendor and feedback data sits in one connected CRM.
- A venue cannot be double booked on the same date; the error is shown before the save.
- Venue availability is updated by code, with no manual step.
- Clients are reminded three days before their event by the Flow.
- Cancellations follow a manager approval with record lock and email alerts.
- Profiles, roles, a permission set and OWD keep access under control.
- A batch job marks past events as Completed.

Limits

- The double-booking check compares only the event date, not start and end times.
- Venue status follows the last saved event, so cancelling one event can show a venue as Available even if it has another confirmed event on a different date.
- The approval has a single step with one assigned approver.
- There is no sharing rule yet; Event is Private, so Vendor Managers see events only through the role hierarchy.
- No client user or client portal has been created.
- No Apex test classes are written yet, which a production deployment would need.
- Reminder emails depend on a verified email sending domain.

08 Conclusion and Roadmap

What we learned and where we would take it next

EventForce shows how a standard Salesforce org can be shaped into a working event management system. Given a clear data model, the system blocks double bookings, keeps venue availability current, reminds clients before their event, routes cancellations for approval and limits access by role. Through this project the team learned object design and relationships, Flow with scheduled paths, approval processes, Batch and Schedulable Apex, and the Salesforce security model. The outcome is less manual follow-up, cleaner data and a clear view of upcoming events for the whole team.

Where we would take it next

Area	Next step
Smarter booking	Check time slots and overlapping dates, not only the event date.
Approvals	Add more approval steps and escalation when a request is not answered.
Sharing	Add sharing rules and a client portal so clients can see their own events.
Quality	Write Apex test classes with enough code coverage for a production release.
Reminders	Add SMS or WhatsApp reminders along with email, using a verified sender domain.
Insight	Add reports and dashboards for vendor performance, feedback ratings and budgets.
